Please note that:													
1 – Intervals stated are as measured in the core box, not true widths.													
2 – The Metal Eq% formula used = (Metal value+(additional metal ppm value*(additional metal \$/gram)/(metal \$/gram)))/10000													
3 – Metal values used in the Eq formulas are as follows (Spot price dates for each metal with the USD price per gram): April 30 th , 2025 – Chrome \$0.00879 Zinc \$0.002585, Nickel \$0.01536, Copper \$0.01006, Silver \$1.0492, Cobalt \$0.0337, Iron \$0.00009976													
4 – The Ni Eq % and Zn Eq % are calculated without a cutoff. Renforth has only performed limited thin section work and no metallurgical work, the percent recovery of metals during processing is not known and is therefore not assumed.													
5 – NiEq and ZnEq values in the table above were calculated with the metals listed below:													
NiEq % = Ni+Cu+Zn+Ag+Co+Cr+Fe													
ZnEq % = Zn+Cu+Ni+Ag+Co+Cr+Fe
